

THINKa[®]

VOICE CONTROL AND VISUALISATION FOR KNX

Connect your KNX home with the world of

Smart, **safe** and comfortable

With Thinka you connect your existing KNX system with the world of Apple, Amazon and Google. This opens up new and smart possibilities such as controlling your house with your smartphone or voice, remote control anywhere in the world, family sharing and smart routines.

To guarantee security and privacy, Thinka is installed inside your KNX enabled home and only communicates to the Internet for software updates. This way information about your KNX installation stays inside your house.

Voice commands, the smart and easy way to control your home

Thinka makes life easy. Control your home just using your voice. Say "Hey Siri, I'm home" and your lights turn on, the blinds open and the heating goes up a bit. Or use Alexa or Google instead.

All you have to do is connect Thinka to your KNX system and fast forward to the 21st century.

Share with your family and use from **anywhere** in the world

Thinka offers remote access to your home. With HomeKit you have state of the art security with the Apple hardware encryption in the Thinka and your Apple device. With an iPad, Apple TV or HomePod you create a safe and reliable home 'hub'. You can invite family members as well, so they can join the smart home experience.

When the first person arrives, turn on the scene "Welcome home"

Nobody at home? Turn on the alarm system and lower the heat..

Thinka and HomeKit respect your privacy and do not retain any information outside your home or device. Alexa and Google offer similar features but require access to your Thinka from their cloud.

A private assistant in your **pocket**

Use your iPhone, iPad or Apple Watch to control your home. Apple's Home app comes preinstalled and is easy to use. Turn on the lights, control the thermostat, open the blinds or activate a scene. Let your phone take care of your daily routines as it knows the time, sunset, sunrise and your location. Amazon and Google have apps as well.

30 minutes after sunset, close the curtains.

When I arrive home after dark, turn on the driveway lights.

Leaving work, heading home? Turn up the heating.
